

NOVA Wire rope Hoists

X-Link

NovaMaster app extension

The **X-Link** app extends the NovaMaster hoist monitoring. The app clearly visualizes all NovaMaster parameters on the users mobile phone on factory floor level. Furthermore, all NovaMaster parameters can be exported in various formats and sent by email.

This tremendously facilitates the cooperation with the service technicians onsite prior to regular maintenance inspections. The app is available for download at the AppStore or the Google Play Store. With this first version of the app we enter the remote technology area. Extensions of the app are planned.

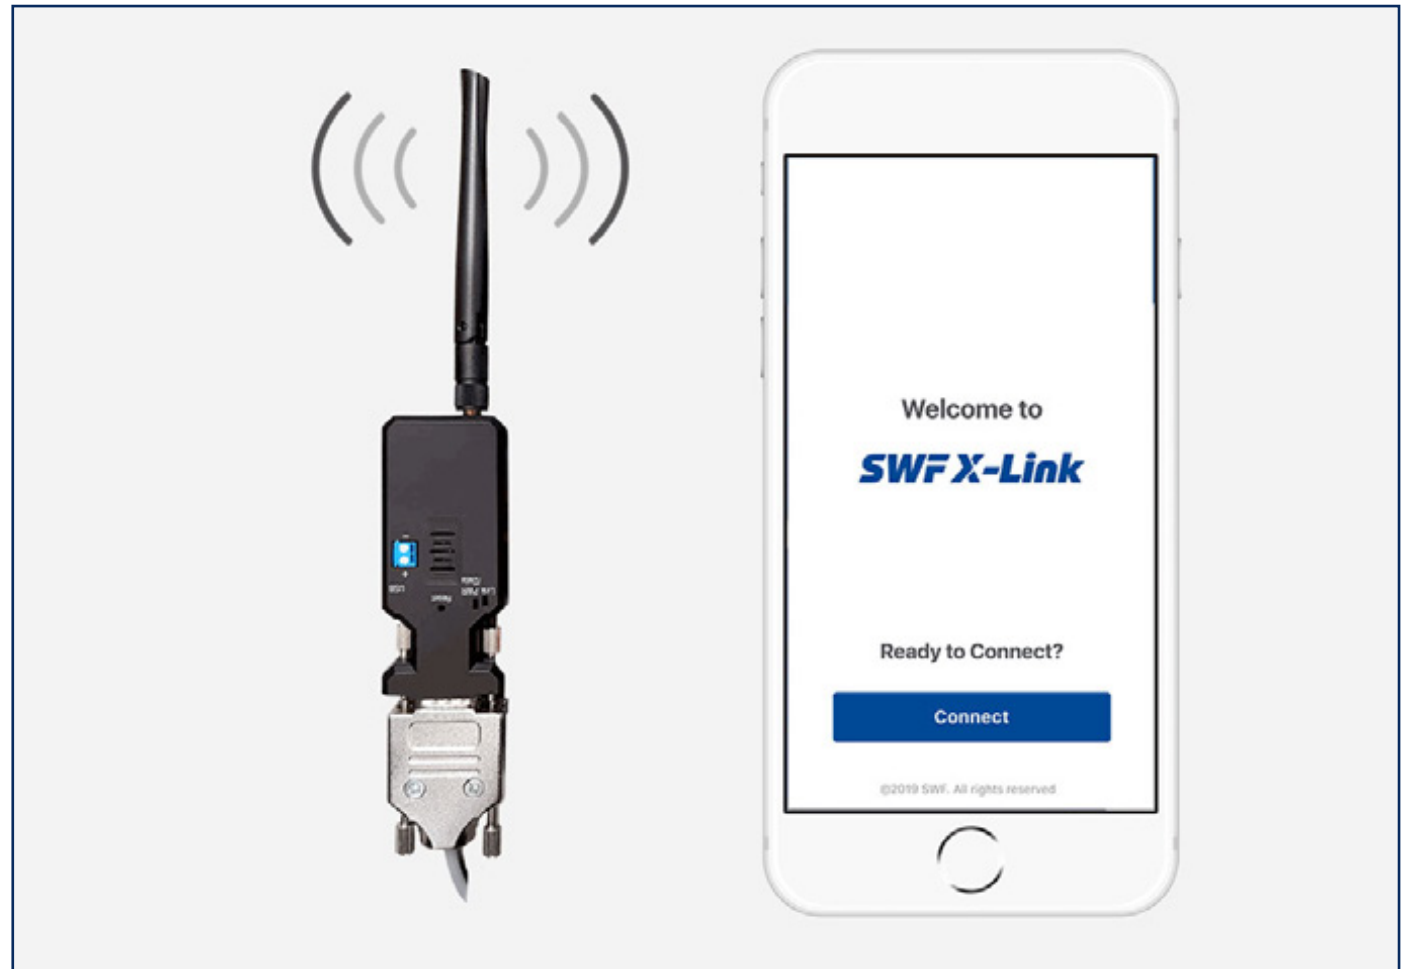

NovaMaster simply needs to be equipped with a hardware module with antenna for wireless transmission and an adapter cable. The user then simply uses his mobile phone on the factory floor level by connecting to NovaMaster via wireless communication technology.

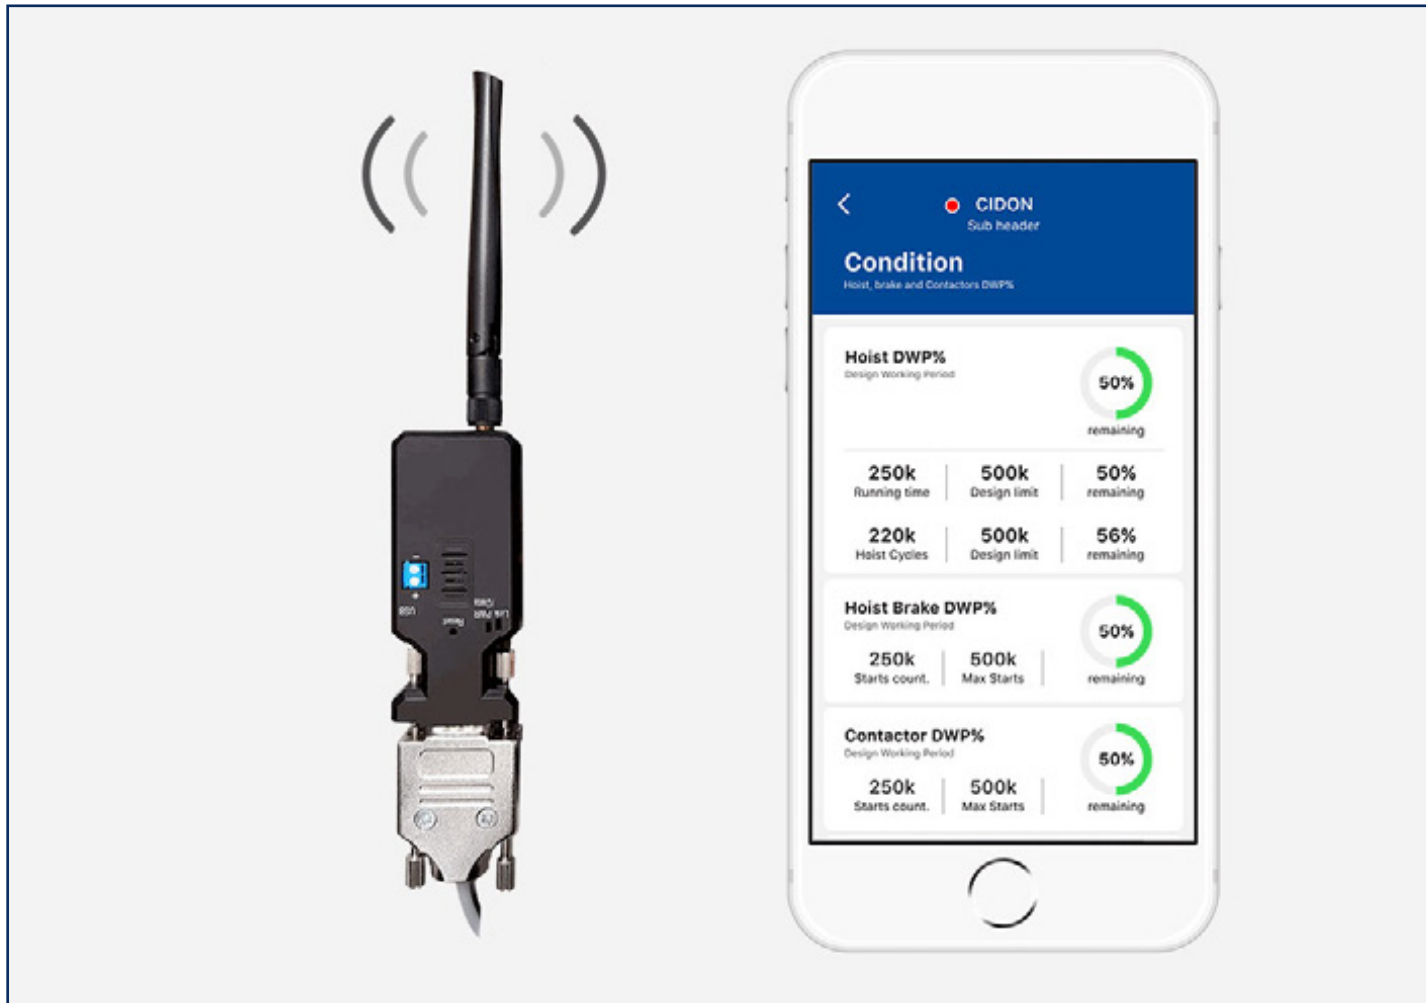

Reading out and evaluating the parameters with **SWF X-Link** before the regular maintenance inspections supports the service technicians prior to onsite services. On the day of the hoist service, the NovaMaster data is simply read out, archived and can be any time compared with data from previous onsite services.

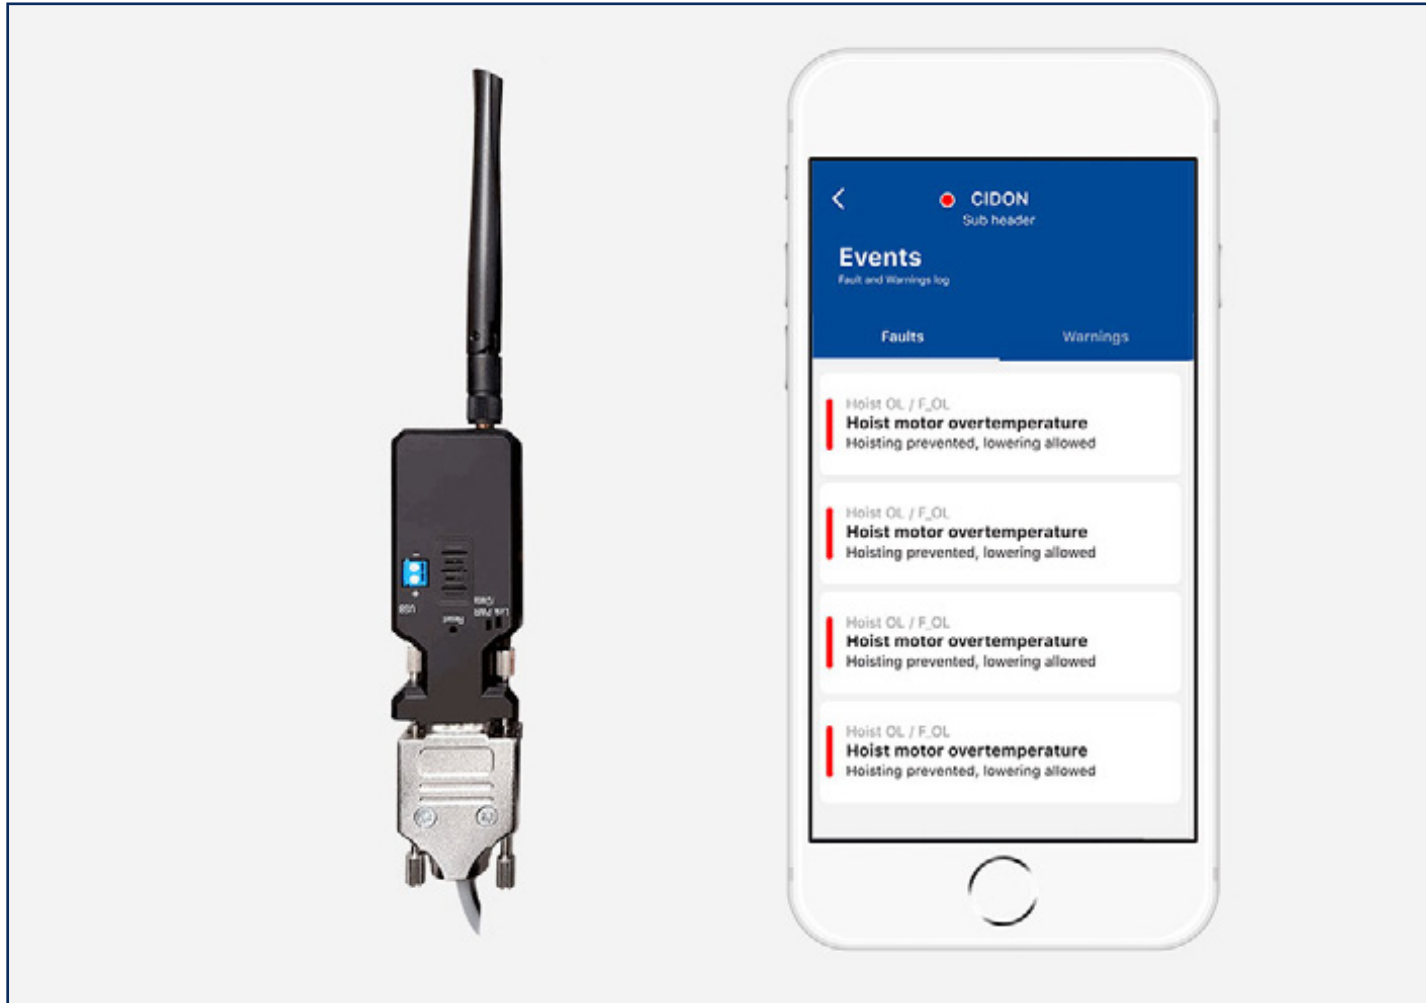

Benefits

- **No downtime:** Fast reading out of all hoist-relevant data at the mobile phone during hoist operation
- **Contemporary work:** Modern and intuitive user interface. Comfortable data display on the mobile phone
- **Optimal preparation for the onsite services of service technicians:** Reading out and evaluating the parameters with SWF X-Link before the regular maintenance inspection supports the service technicians prior to onsite services
- **Data export made easy:** Convenient data export in various formats
- **Easier to track down errors:** Clear error descriptions supplement the previous error codes
